

## ISTE240

### Exercise – 06

#### PHP – Part 1 - Forms

#### DUE Check MyCourses

**Objective:** By completing this exercise you will gain experience using PHP to process form data.

**Directions:** Modify your **orderform.php** and **orderprocess.php** files (from your classwork this week) to process additional data.

**Step 1:** add the radio buttons to the **orderform.php** file as follows:

Select the number of toppings you want on your pizza:

- ☒ No Extra Toppings
- ☐ One Topping
- ☐ Two Toppings
- ☐ Three Toppings

**Step 2:** Process the data by adding a toppings cost as follows:

No Extra Toppings = 0

One Topping = 2.00

Two Toppings = 3.00

Three Toppings = 3.75

**Step 3:** Process the total pizza cost by adding the topping cost to the pizza cost, then calculate tax on that sum.

**Step 3:** Add a line for the topping cost to the **orderprocess.php** so the user sees all the costs breakdowns. Something like this:

Pizza Price: \$ 16.99

Topping Price: \$ 3.00

Tax Amount: \$ 1.60

Total Cost of your order is: \$ 21.59

**As always:** Zip all EX06 files together and call the zip file EX06.zip – upload to myCourses and provide a link from your class page.

### Grading Rubric for Exercise 6 – PHP Part 1

Radio buttons on the order form	4
Topping Cost determined	8
Total Pizza Cost calculated Properly	3
Topping Cost shows on output form	3
Comments on all new code you added	2
<b>Total</b>	<b>20</b>
